WEBDHL, WEB Development and Hosting Ltd, is a leading global technology services provider, delivering business solutions to its clients. WEBDHL founded the information technology outsourcing department nearly 4 years ago. Today, WEBDHL delivers a broad portfolio of information technology, applications and business process outsourcing services to clients in the manufacturing, financial services, healthcare, communications, energy, transportation, and consumer and retail industries, and to governments around the world.

WEBDHL comprises of over 20 support staffs in Mauritius and over 75 Developers in India. We have 2 satellite offices providing support in the UK and the US.

What we do

WEBDHL provides the best solutions for executives to maximize return on their IT investments. Our deep industry knowledge enables us to provide clients with innovative ideas that help them improve productivity and security. We deliver on our commitments, so clients can build strong relationships with their customers, achieve profitable growth and win in the marketplace.

How we do it

Our portfolio is built around innovative offerings in applications services, business process outsourcing and infrastructure technology outsourcing. We use our next-generation global delivery system and strategy to ensure high-quality, cost-competitive services are provided from the optimal mix of onshore, nearshore and offshore locations. This enables our clients to respond quickly to changing market dynamics and increase their competitiveness.

- E-commerce Services
- Exchange Hosting
- SiteBuilder Services
- WEB Integration Services
- Network & Security management

Application maintenance

In today's constantly changing market, providing quick and effective IT solutions can make a world of difference to an organization's bottom-line. That is why WEBDHL's Application Maintenance Center has become such a tremendous success. Any system, even after its development and implementation, requires constant monitoring so it can be adjusted to the dynamics of the particular business.

More than 80% of companies allocate their IT budgets to continuous improvements, updates, problem resolution, and technical support for the production systems. This illustrates the importance of maintaining an application throughout its life cycle.

Our Services Include:

- Continuous maintenance and enhancement.
- Collaborative application management.

Application Development Services

Application Migration / Re-architecting:

Legacy systems transform into modern systems built on cutting-edge technologies & architectures.

Business Intelligence:

Our real-time business decision making is done out of massive volume of data. It is on focused on Informatica and Cognos.

Custom Application Development:

Web or Client/Server software systems built on Java, C++, .Net and Oracle.

System Integration:

EAI techniques and tools to provide solutions to integrate: legacy mainframes, n-tier applications, ERPs, CRMs and SCMs.

We have vast experience in implementing and integrating some of the leading packages such as SAP, Oracle, Peoplesoft and many others.

eCommerce Services:

Development under a wide variety of standards: EDI x12, EDIFACT, RosettaNet, XML.

Open Source:

Application development is done on the platforms of Linux, Database Servers, Application Servers (JBoss, Tomcat, PHP), Web Servers, IDEs, SCM, and Firewalls.

Mobile:

Based on an architectural driven development, we provide enterprise solutions built on top of a robust platform/framework, with ready to use application modules for vertical industries and a set of adapters to practically any packaged application or custom development. This way, we enable integration capabilities covering full-integration brokers, interfaces and application servers, and support for most of the mobile platforms, from Research In Motion's BlackBerry, PalmOS, and Microsoft Windows Mobile, to Phone, Handheld, and Tablet PC devices.

Application Development core elements are:

- Best practices obtained as result of our almost 15 years of experience in application development.
- Technology Frameworks (re-usability, knowledge base).
- Process digitization (dashboards & scorecards) & SLA framework.
- Alignment to Six Sigma & CMM compliance.

The key factors:

- Integrated Quality Management.
- Defined, Optimized and Automated Processes.
- Constant Forecasting and Performance Measurement.
- Highly Specialized Human Resources.
- Extremely Low Employee Turnover.
- Service Level Agreements SLA.

Software Quality Assurance

Features:

- Complete spectrum of software testing, including complex testing architectures.
- Comprehensive range of testing types, practices and know-how architectures.
- Variety of testing environments and testing automation tools needs architectures.
- Contemporary testing methodologies including "white", "black" and "grey" box, rapid and incremental testing needs architectures.
- Full documentation support including process documentation and status reports, in addition to documented test cases and results.
- SQA Service flexibility delivered through the Software Risk Reduction Methodology.

Types Of Testing Offered:

- Functional/regression testing.
- API testing.
- Performance/load/stress testing.
- Compatibility/configuration testing.
- Usability testing administration.
- Security testing.
- Data migration/conversion testing customer data.

Scope:

Whether you need ad hoc testing, automated, or just application profiling, our engagement implementation roadmap can address every need from your testing life cycle.

Test Planning:

Test strategy, test objective & approach.

Test Analysis & Design:

Analyze functional requirements, make automation decisions, design test cases, design test environments.

Test Environment:

Install HW, SW, test tools, and perform a smoke testing.

Test Implementation:

Develop test scripts and create test data.

Test Execution & Reporting:

Execute test cases and test scripts, test report & metrics, and defect management.

Test Completion:

Acceptance, delivery of test ware, postmortem.

Project Management:

Tracking and control of testing processes, overall managed testing initiatives.

Configuration & Change Management:

Version control, source control, change management, configuration items.

Quality Assurance:

Six Sigma projects.

Oracle Practices

WEBDHL offers a full suite of business, technology and application management consulting services to assist in your e-business transformation.

The suite of services includes:

- Oracle Applications Support Outsourcing.
- Oracle Applications 11i Implementations.
- Oracle Applications 11i Upgrades
- Contract Staffing.

WEBDHL's Oracle Practice provides all of the services necessary for an e-business transformation - not just software implementation. Our goal is to provide strategy through implementation services to our clients.

Security Consulting

As independent consultants, WEBDHL leverages more than 3 years of technology expertise, development center set-up experience and methodology best-practices to deliver the following services:

Security strategy and policy development:

- Business requirements review.

Firewall & IPS design and implementation:

- Identity and Access Management.
- Messaging & encryption.
- Network infrastructure (LAN, WAN, VPN access) behavior.

Vulnerability Assessment and Management:

- Identification of potential areas of exposure.
- Penetration testing analysis.
- Wireless security assessment needs.
- Malicious threat assessment needs architectures.
- Internet risk assessment.
- Product security assessment (for ISVs).
- Vulnerability fixing.

ISO17799, BS7799, ISO27001 certification consulting:

- Client's security policies assessment.
- GAP analyses.
- Risk mitigation analyses and designing of de-risking plans.
- Design, confirmation and implementation of IT and physical security policies.
- Internet risk assessment.
- Assistance in negotiations and pre-certification audit.
- Vulnerability fixing.

We offer deep expertise and experience in:

- Existing IT security standards.
- Corporate security, both physical and IT.
- ITSM processes and standards development.
- Encryption.
- Business continuity and disaster recovery.

Performance Services

WEBDHL offers a comprehensive and flexible suite of Performance Services that provide real solutions to real problems. WEBDHL can help you to:

- Understand your performance problems.
- Design an appropriate solution.
- Provide expertise and resources required to implement the solution.

Monitoring and Troubleshooting:

Do you have nagging performance problems that you can't get to the bottom of? Is your mission critical system a black box? WEBDHL's Monitoring and Troubleshooting services can help you find and resolve the problems leading to poor performance and help you understand what's going on inside your system.

Performance Testing:

Need to understand the impact of making large changes to your system? Need to expand your quality assurance process to include Performance Testing, but don't know where to start? WEBDHL can help you with these Performance Testing problems by mentoring your team, augmenting with expertise and resources, or taking on the effort.

Performance Engineering:

Developing a new system or application that needs to meet strict performance and scalability requirements? Need to dramatically improve the performance of your system? WEBDHL can mentor you through the development of a Performance Engineering practice. It can contribute specialized skills and expertise that allows you to achieve aggressive performance goals.

Sizing and Capacity Planning:

Are you implementing a new mission critical system and need to know that it handles required usage levels? Do you have a system that's growing in usage and need to plan how to meet growing demand while minimizing increases in cost and complexity? WEBDHL's Sizing and Capacity Planning services can help you plan with insight and add certainty to your implementation plans.

BPO Services

WEBDHL is among the first of its kind BPO, offering both onshore and offshore outsourcing and consulting services specializing in IT-enabled services, back office outsourcing services and business process outsourcing solutions from India or Mauritius guaranteed to cut costs and improve quality.

WEBDHL's outsourcing services help mitigate risks and secure benefits through a structured, proven approach. WEBDHL is a fast growing remote e-services company, providing high quality-value added Contact Center services and Business Process Outsourcing (BPO) services from our state of art delivery centers based at Hyderabad, India or Mauritius.

WEBDHL offers the satisfaction that comes from working with a technologically sound business partner who is committed to continually invest in people, processes, infrastructure and facilities, ensuring the highest levels of performance.
